

# MOBILITY CART KIT (MOCAK)

LCFH Mobility Enhancement

The Mobility Cart Kit (MOCAK) is made especially for the Large Capacity Field Heater (LCFH), allowing the user to move the heater over more rugged terrain and to be towed at low speeds (20 mph max.) by vehicles such as the M-Gator 6x4 Utility Vehicle, GSE ramp tractor, or pushback tractor. The MOCAK also allows for easy loading onto rotary wing aircraft via the loading ramp.

The MOCAK can be assembled by two personnel in under an hour. It is made of light weight aluminum with a heavy duty steel axle. Front swivel casters can be locked two ways, for rolling and rotating. The draw bar can be retracted to conserve space

The MOCAK is manufactured to increase mobility for the Large Capacity Field Heater (LCFH) and facilitates towing and aircraft loading.

## KEY FEATURES

- Lightweight aluminum components
- Low maintenance
- Retractable drawbar
- Locking wheels
