

HDT D1000B HEATER REMOTE FUEL PACK

PN 302-H029040

HDT's D1000B Heater is rugged, lightweight, rust resistant, shockproof and easy to operate and maintain, providing 99,500 BTU/H of dry, clean heat at a rate of 1,020 CFMs. The heater includes an electronic control system that monitors for high heat conditions and flameout, and operates on an external input of 120VAC, 60 Hz, single-phase power.

The D1000B remote fuel upgrade is a simple, cost-effective improvement to the widely popular D1000B heater.

The upgrade consists of a fuel filter assembly, de-aerator, fuel lines, selector valve and a standard quick disconnect which accepts US Army standard fuel hoses. The clear polycarbonate fuel filter bowl allows for easy fuel inspection and can be removed without tools for cleaning. The de-aerator purges air from the fuel to prevent flame out.

The selector valve and quick disconnect upgrade allows the heater to be operated from a five-gallon fuel can (jerry can), fuel drums or bladders using US Army standard suction feed adapter. This is helpful for Units that need to use air transport where the fuel tank must be dry. Using remote fuel also reduces heater service as there is no fuel in the tank to go bad during the off season.

The upgrade can be installed in minutes with basic hand tools and does not require any adjustment to the heater.
