

HDT D1000B HEATER FUEL SYSTEM UPGRADE

PN 1003798-2-SV

HDT's D1000B Heater provides 99,500 BTU/H of dry, clean heat at a rate of 1,020 CFMs and is rugged, lightweight, rust resistant, shockproof and easy to operate and maintain. The heater includes an electronic control system that monitors for high heat conditions and flameout, and operates on an external input of 120VAC, 60 Hz, single-phase power.

The D1000B fuel system upgrade is a simple, cost effective improvement to the widely popular D1000B heater.

The upgrade consists of military specification MIL-H_13444 suction line hoses. These fuel lines have a long service life and are impervious to fuels such as JP8, F24 and diesel. A fuel filter assembly with a clear polycarbonate bowl is also included. The clear bowl allows for easy inspection for dirt and water and can easily be removed without tools for easy cleaning.

The upgrade can be installed in minutes with basic hand tools and does not require any adjustment to the heater.
