

# HDT QUICK HALT / TAC SHELTER

*Our Lightest, Fastest Shelter System*

The Quick Halt / TAC Shelter by HDT fulfills the U.S. military's requirement for a swiftly deployable shelter in forward operations. Specifically designed for Company-Brigade level operations, this shelter offers rapid assembly and robust construction. It serves as an ideal solution for units requiring frequent relocation to maintain stealth and security.

Available in multiple sizes, Quick Halt / TAC shelter can be complexed or booted to a vehicle to give a command element additional space. The shelter includes a fabric floor, interior liner with wire harness, ECU ports and power cable passthrough.

Using combat-proven mil-spec design and materials and HDT's articulating frame technology constructed from Titanite® components. Titanite provides five times the flex strength than aluminum for the same diameter and cross-sectional area, resulting in a lightweight and cost-effective solution that reduces the logistical burden associated with legacy shelters.

## KEY FEATURES

- Quick Halt/TAC Includes:
  - Fabric floor
  - Interior Liner with wire harness
  - ECU ports, power cable passthrough on end walls
  - Steel stake kit with mallet
  - Repair kit
  - Pre-attached wind lines
- Complexing door to door or shelter open end can be done without additional boots, frame, or fabric components
- Light fixture hanging rings
- Interior liner assists with temperature regulation
- Withstands 55 mph sustained wind

### Titanite vs. Aluminum

**Images 1-3:** Titanite poles require 52% more force to make a 6" bow and have 98% less deformation after stress is applied and released.

**Images 4-6:** Aluminum poles bend and stay deformed after a 6" bow, which means a shorter life and more replacements
