

# FFA100 FAMILY

Fan Filter Assembly 100 CFM (170 m<sup>3</sup>/h)

## SYSTEM CONFIGURATION

The FFA100 is a modular CBRN fan filter assembly / air filtration system. Designed for mobile applications, the FFA100 can be configured as a push-thru or pull-thru filtration device with a quick filter replacement retention system. Mounted horizontally or vertically on one of three different mounting surfaces, the FFA100 is capable of providing up to 100 CFM (170 m<sup>3</sup>/h) of filtered air into a protected enclosure, or Toxic Free Area (TFA). The FFA100 creates positive pressure up to 4 IWG (1000Pa) and its modular design offers the choice of a low-efficiency or high-efficiency inertial particle separator (IPS).

- **Push-Thru** filtration systems push air through the filter into the TFA. The filter is in positive pressure. This configuration requires the system to be installed outside the TFA. Filter replacement is handled from the vehicle exterior. The high efficiency particle separator does not require a scavenger fan with push-thru filtration system configurations.
- **Pull-Thru** filtration systems pull air through the filter into the TFA. The filter is in negative pressure. This configuration requires the system to be installed inside the TFA. Filter replacement is handled from the vehicle interior, or through special exterior access provisions through the vehicle armor. The high efficiency particle separator requires the addition of a scavenger fan.

## FAN UNIT

The FFA100 is equipped with a high pressure, high performance variable speed, 28VDC, brushless fan unit. When connected to any of the HDT System Control Modules (SCM), the fan airflow output is controlled to maintain constant pressure in the TFA, and does not require a pressure relief valve (PRV). The fan may be mounted directly to the filter cradle, or ducted to the filter cradle for better space utilization.

## FILTER

The FFA100 employs a US M48A1 Gas and Particulate filter canister, designed specifically for use in combat vehicles. It is widely used by the US armed forces in vehicles such as the Abrams MBT, Bradley fighting vehicle, MRAP and HIMARS. A ventilation filter (HEPA only) and a dummy filter (empty but simulating a real filter airflow restriction) is also available.

## SYSTEM CONTROL MODULES

A simplified System Control Module (SCM) is available to monitor TFA internal pressure and to vary fan output to maintain constant TFA pressure. The SCM displays low pressure conditions or initiates audible / visual alarms in a dangerous low pressure condition.

A more sophisticated SCM is also available. It continuously displays TFA pressure and filter pressure loss and can connect with two Joint Chemical Agent Detectors (JCAD) or LCD3.3 detectors. Upon threat detection the SCM will turn on the FFA100 automatically. A manual override is also provided.
